Overview of Testing Results for Lead in Drinking Water and Corrective Actions for Norfolk Naval Shipyard (NNSY) New Gosport Child Development Center (Building 1641-1642)

The Navy is committed to maintaining safe drinking water on its installations. City of Norfolk water supplied to the Navy's water distribution system is regularly tested in compliance with the Safe Drinking Water Act. Lead exposure is a particular concern for children, and lead may enter drinking water due to its presence in pipes, fittings, solder, and fixtures inside a building. Navy policy requires that we test the lead content of drinking water in priority areas such as youth centers, child development homes, and child development centers (CDCs) every five years.

On October 6, 2023, Navy environmental personnel conducted lead testing at NNSY New Gosport CDC Building 1641-1642 in accordance with Navy and United States Environmental Protection Agency (EPA) guidelines. Water samples from outlets in the CDC were sent to James R. Reed & Associates, a state-certified laboratory, for analysis.

At NNSY New Gosport CDC Building 1641-1642, water from outlets used for drinking, cooking, and washing were tested. Out of 84 samples collected, no water samples tested greater than the Navy screening level of 15 parts per billion (ppb) for lead in drinking water in CDCs.

A summary of all test results is included for your information in the following enclosures:

- **Enclosure 1**: Summary of results
 - Table 1 Summary of Results summarizes the data by category of use. The table provides a description of each sampling location using four columns; Category, Outlet No., Sample Identification, and Outlet Description. The Category column contains information about whether the outlet is used for drinking water (water fountain), cooking (food preparation), or washing (primarily handwashing). The Outlet No. is the inventory number for the outlets at the CDC. The Sample Identification column is the unique identification used to label each sample bottle. The Outlet Description column contains additional information to describe the outlet sampled under each category. The next set of columns in Table 1 provides Initial Sampling Results. EPA sampling protocol requires water to not be used from 8 to 18 hours prior to first draw sampling, to the extent practicable. Therefore, the Initial Sampling Results were from first draw samples collected in the early morning.
 - Table 2 Summary of Statistics summarizes all data collected at the building during this event.
- **Enclosure 2**: Floor plan of NNSY New Gosport CDC Building 1641-1642 and a summary of the outlets and results for outlets tested.
